Segments

What is segmentation?

- Segmentation is the division of a population into groups based on the similarity of their responses to survey questions
- Segmentation employs multiple mathematical techniques which are analyzed and interpreted by project researchers
- Researchers assign names to segments to aid in interpretation
- The analysis was done nationally, though the size of each segment varies from state to state
- This segmentation was based on responses to questions about attitudes and beliefs about problem gambling
- Four segments were identified, each encompassing roughly ¼ of the population

Responsible Gamblers

- Believe that genetics, medical issues, traumatic experience can cause gambling problems
- Do not believe gambling problems result from moral weakness
- Believe in effective recovery
- Know where to get help
- Endorse more services
- 81% past year gambling
- Bet on games of chance
- Endorse positive play and have low rates of risky behavior
- 33% of Minnesota adults

It's Your Fault

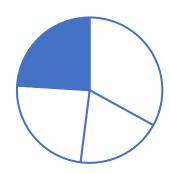

- Do not believe that genetics, medical issues, traumatic experience can cause gambling problems
- Believe gambling problems result from lack of willpower and believe gamblers are to blame
- Do not support more services
- Do not believe gambling is immoral
- 87% past year gambling
- Bet on games of chance and games of skill
- Average levels of positive play and risky play
- 19% of Minnesota adults

Moralists

- Most likely to believe that gambling is immoral and against their religion
- Believe gambling problems result from lack of willpower and moral weakness and believe gamblers are to blame
- Somewhat supportive of more services
- Not aware of services
- 58% past year gambling (mostly lottery)
- Average levels of positive play and risky play
- 24% of Minnesota adults
